

Debug in Note Taking App

Problem 1 :

Primarily the method was mentioned as “POST”, but at the beginning POST method will not work. It throws the error as Method is not allowed.

```
@app.route('/', methods=["POST"])
```

So we have to include “GET” method also

```
@app.route('/', methods=["GET", "POST"])
```

Problem 2 :

At first the list variable ‘notes’ is empty, so it returns ‘None’ when we want to render it into home page.

I solve this problem by taking notes at first by ‘GET’ method and after getting the user notes I use ‘POST’ method to display all notes.

For implementing ‘POST’ in home html page I add both ‘action’ & ‘method’ value :

```
<form action="{{ url_for('index') }}" method="POST">
```

Then implementing conditions for using both methods:

```
if request.method == "GET":
    return render_template("home.html")
else:
    note = request.form.get("note")
    notes.append(note)
    return render_template("home.html", notes=notes)
```
